

YARIS T SPORT CONCEPT

Concept leading the way for production Yaris sports model in 2007

- New 1.8-litre petrol engine
- Extensive sports body styling features
- 17-inch alloy wheels

The Yaris T Sport is a design exercise that points towards a production sporting Yaris that is scheduled to arrive in showrooms during 2007, powered by a new 1.8-litre petrol engine.

The key reference point for Toyota's development team was to create a refined sports hatch, compact in size with fun-to-drive qualities to appeal to younger buyers, but also with high equipment levels and comfort appropriate for both day-to-day driving and longer trips.

The sports styling is bold, with a black mesh grille at the front that adds emphasis to the deep bumper with integrated fog lights. There is a redesigned bumper at the rear, too, plus deep side skirts and a tail spoiler.

The T Sport is fitted with 17-inch wheels for sharper ride and handling, while new-look tail lights, a chromed exhaust pipe and a T Sport badge on the front grille add the finishing sports touches. The concept car is finished in a dedicated body colour, Storm Grey.
